Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

Notes

Data are shown by quartiles when at least 13 of the sampled businesses report the specific item.

Records were ranked in ascending order according to sales size. Each quartile (i.e. bottom 25%, lower middle 25%, etc.) represents one quarter of the total number of businesses. Within each quartile, the average ratio is presented. For comparison purposes, the high and low values of sales are shown.

Introduction and Data Sources

This publication is one of a series representing industry profiles of small businesses. Other reports currently available from the Small Business and Special Surveys Program are listed in Appendix A under the title **Selected Publications Relating to Small Business**. The data contained in this report are the result of a joint project of Statistics Canada, the Department of Regional Industrial Expansion and all provincial and territorial departments responsible for small businesses.

Returns submitted to Revenue Canada Taxation for the year 1985 were used to derive the information shown in this bulletin. The statistics were compiled from only those businesses reporting sales of between \$10 thousand and \$2 million. The choice of this particular size range was largely driven by operational considerations and does not represent an official definition of what constitutes a small business.

Data pertaining to businesses in tables 1, 2, 3, and 6 are drawn from a statistical sample of taxation records of corporations and unincorporated sole proprietorships and partnerships. The tables are on a fiscal year basis. Data for table 4 are derived from incorporated businesses only. Corporate data in this report are derived from tax returns, which typically consist of a T2 form, a set of financial statements and other supportive schedules. Similarly unincorporated business tax returns which report self-employment income typically consists of a T1 (General) form, a set of financial statements and other supportive schedules. Table 5 is derived from the T4 form which consists of a summary of wages and salaries, and is on a calendar year basis.

The 34 industry groups selected for publication are those most densely populated by small businesses. These groups represent approximately 50% of small businesses, the remaining 50% being distributed over approximately 800 other industry classifications. Our coverage will expand annually until the taxation year 1987 (available in 1989) when over 100 industry groups representing nearly 75% of Canada's small businesses will be profiled.

METHODOLOGY

Records selected for this study have been ranked in ascending order of sales within an industry and province and divided into four equal parts (quartiles) so that each part (quartile) includes one quarter of the total number of businesses in a given industry. Within each of these quartiles we have displayed the lowest and the highest sales values reported.

Estimated data published for tables 1, 2, 3 and 6 are derived from a statistical sample of approximately 20,000 small businesses distributed amongst 34 industry groups. For example, the number of observations in the sample for the trucking industry range from a high of 748 businesses in Ontario to a low of 18 in the Northwest Territories. Where the sample size of a given industry group is less than 20 businesses, the distribution into quartiles has not been done because of lack of statistical representativeness. In such circumstances, only the total values are published. Furthermore, for quality assurance reasons, a variable reported by less than 13 businesses is not distributed into quartiles.

Estimates published in table 4 are derived from a random sample of approximately 10,000 incorporated businesses selected from the same 34 Standard Industrial Classification groups (SIC).

a) Table 1

This table shows the average ratio of selected expenses items to sales for a) all businesses in the industry and, b) for only those businesses reporting the expense item. It is important to note that in the case of b) each expense ratio shown is independent of any other ratio because the numerator and denominator of the ratio calculation includes only those businesses reporting the particular expense. For example, some small businesses own the building from which they operate and may declare mortgage expenses while others in the same group may not own their business premises and incurrent rather than mortgage as an expense.

b) Table 2

This table displays the average values of selected asset, liability and equity items for all businesses. Columns may be summarized using the accounting equation **ASSETS - LIABILITIES = EQUITY** (the total may not be exact due to rounding).

c) Table 3

Table 3 presents some of the more commonly used financial and operating ratios. The figures which make up these ratios have been extracted from Table 2 (except for interest expense) and the ratios represent the average of ratios for each business in the group.

Introduction and Data Sources - concluded

Definitions

1. Liquidity Ratio

$$\text{Current} = \frac{\text{current assets}}{\text{current liabilities}}$$

2. Leverage Ratios

$$\text{Debt/Equity} = \frac{\text{total liabilities}}{\text{equity}}$$

$$\text{Interest Coverage} = \frac{\text{net profit} + \text{interest expense}}{\text{interest expense}}$$

$$\text{Debt Ratio} = \frac{\text{total liabilities}}{\text{total assets}}$$

d) Table 4

Table 4 shows the source and application of funds and the subsequent change in working capital. Values shown are averages for all businesses and columns are additive. This table is limited to incorporated businesses only.

e) Table 5

The data in this table are derived from the payroll records of employers and apply to all employees who are issued T4 tax records. Employees earning less than \$500 a year may be excluded as this is the cutoff for the mandatory issuance of T4 tax records.

Due to the annual nature of the data source, we assume that both newly reporting businesses and no longer reporting businesses have been in activity for six months. As a result, their estimated average labour units (ALUs) are assumed to be twice their actual ALUs (i.e. annualized).

f) Table 6

This table shows the distribution of businesses reporting a profit or a loss in an industry from 1982 through 1985. The businesses identified in this table are the same as those in Tables 1 to 3.

How to Use the Tables

The profiles are comprised of six tables. Each table (except Table 5) displays data in quartiles based on sales.

To use the tables:

- 1) Select the industry and/or province of interest to you (See Table of Contents).
- 2) Locate the appropriate sales range that is displayed on the two lines entitled "Low Sales Value" and "High Sales Value".
- 3) The selected range will indicate the proper quartile, i.e. the bottom 25%, the lower middle 25%, the upper middle 25% or the top 25%.
- 4) All data pertaining to the selected business will be in that column.

For example:

Let us take a plumbing business in Canada with sales of \$50,000.

- 1) Select the table entitled "Plumbing Contractors (SIC 4241)".
- 2) Sales of \$50,000 is in the range of \$37,000 to \$90,000 ("Low Sales" and "High Sales" values).
- 3) Thus, sales of \$50,000 are in the lower middle 25% quartile.
- 4) All relevant data pertaining to this plumbing business with sales of \$50,000 are in this quartile for Tables 1 to 4 and Table 6.

Note:

One can note that wages and salaries expense in the plumbing industry range from 10% of sales in the lowest quartile to 26% in the highest quartile. Such variations may illustrate how some expenses vary in proportion to sales.

This comparison by quartile is applicable to Tables 1 to 4 and Table 6.

Table 5 contains employment data for the years 1982 and 1985 and shows the changes in the industry over this time period. The data comprised in this table are cross-sectional.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours. Statistics Canada, Catalogue No 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

Standard Industrial Classification Definition:

SIC 4581 - Taxicab Industry

Businesses primarily engaged in providing passenger transportation by automobiles not operated on regular schedules or between fixed terminals. Taxicab fleet owners and organizations are included regardless of whether drivers are hired, rent their cabs or are otherwise compensated. Also included are those who own and operate their own taxicabs, taxi dispatching, road motor vehicle taxi service, and taxicab service.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

See Notes on Symbols Page.

Standard Industrial Classification Definition:

SIC 6031 - Pharmacies

Businesses primarily engaged in retail dealing in drugs, pharmaceuticals and patent medicines and drug sundries. Prescribed medicines must be sold but are not necessarily the source of greatest revenue. They may be secondarily engaged in selling other lines such as cosmetics, toiletries, tobacco products, confectionery, stationery, giftware and novelty merchandise.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment Payroll and Hours Statistics Canada Catalogue No 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year

(3) Refers to businesses reporting no payroll deductions in the following year

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

Standard Industrial Classification Definition:

SIC 9111 & 9112 - Motels, Hotels and Motor Hotels

Businesses primarily engaged in providing short term accommodation to the public, with or without food, beverage and other services. Those firms with six or more hotel or motel hotel-type rooms are classified here regardless of the major source of revenue. A hotel-type room has access only from the interior of the building and a motel hotel-type room has access from both the interior and exterior.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

See Notes on Symbols Page.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

See Notes on Symbols Page.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) These estimates are based on a sample of businesses reporting sales between \$10 thousand and \$2 million.

(2) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of all businesses in the sample}} \times 100$ for each quartile.

(3) Value in each cell = $\frac{\text{Total weighted expenditure on a given item}}{\text{Total weighted sales of businesses reporting this item of expenditure}} \times 100$ for each quartile.

Since the number of businesses reporting a specific expense may differ for each cell, the total (profit (loss) plus expenses) does not necessarily equal 100%.

(1) Average labour units are calculated by dividing total payroll by the average annual wage and salary rate as reported in the Survey of Employment, Payroll and Hours, Statistics Canada, Catalogue No. 72-002. An average labour unit could be interpreted as a full-time employee. Note that the business size groups used are determined at the Canada level. Thus if a business has at least 500 employees in Canada as a whole but less than that number in any given province it is shown in the 500 and over group.

(2) Refers to businesses reporting no payroll deductions in the previous year.

(3) Refers to businesses reporting no payroll deductions in the following year.
